

CLAIMS:

1. A ball carrier device for use with a wheeled vehicle having handle bars wherein, the carrier device comprises
a main strap member forming an enlarged central loop and a pair of opposed auxiliary loops; and,
a plurality of sling strap members each having opposed ends connected to opposed surfaces on the central loop portion of the main strap member.
2. The ball carrier device as in claim 1; wherein, all of the sling strap members are connected to one another proximate their respective midpoints.
3. The ball carrier device as in claim 2; wherein, said plurality of sling strap members comprise at least three sling strap members.
4. The ball carrier device as in claim 3; wherein, all of said strap members are fabricated from flexible material.
5. The ball carrier device as in claim 3; wherein, all of said strap members are fabricated from resilient material.
6. The ball carrier device as in claim 3; wherein, all of said strap members are fabricated from flexible and resilient material.
